MIFTAH

Where agriculture feels at home

PARTNER BRIEF · 2027

TURNKEY FARMS & NET HOUSES · FROM 30 HA

From bare land to first harvest.

One partner, accountable for all eleven stages: from the soil test and the business plan to the net houses, the planting, the local team and the harvest.

ISRAEL · PORTUGAL · EUROPE · AFRICA

KFAR MASARYK, ISRAEL

A farm abroad has a dozen contractors. Yours has one.

MIFTAH Projects plans, manufactures, builds and runs agricultural projects for private investors, agricultural companies and entrepreneurs. Soil, structures, water, plants and people come under one plan and one schedule, so the gaps between suppliers never land on the investor.

20+
years designing and building net houses

410,000 m²
of net houses built abroad, in 5 countries

11
turnkey stages delivered by our own people

30 ha
minimum project abroad (50 dunam in Israel)

REAL · DRONE One MIFTAH net house covering a whole orchard. The truck gives the scale.

Building it piece by piece

- ○ Soil, design, steel, irrigation, nursery and labour each contracted separately
- ○ Structures designed without the crop and the wind in mind
- ○ Components shipped untested, problems found in the field

With MIFTAH

- ◆ One plan and one schedule, from soil test to harvest
- ◆ Structures engineered around the crop, the soil and the wind
- ◆ Poles, cables and nets made and tested in our plant before they ship

> “The mistake we see most often: trying to do it alone to save money.”
>
> Merav and Yiftach Hasfel, co-CEOs

Eleven stages. One team.

Every stage is done by MIFTAH people. Partners can hand us the whole path or a single stage.

	PHASE	STAGE	WHAT YOU RECEIVE
01	ASSESS	**Soil testing and crop fit**	Soil results and a crop recommendation
02		**Business plan and budget**	A business plan and budget for the investor
03	DESIGN	**Farm design**	Layout and engineering of structures, irrigation and roads
04	BUILD	**Structures and net houses**	Net houses, loading sheds and windbreaks, from our plant
05		**Irrigation systems**	A working irrigation system
06		**Procurement and logistics**	Materials on site when the schedule needs them
07		**Planting**	A planted farm
08	OPERATE	**Local team**	A trained local team, led by MIFTAH
09		**Growing and agronomy**	Day-to-day growing management, season after season
10		**Maintenance**	Structures and systems kept in working order
11		**Harvest and marketing**	The crop harvested and marketed

Stays with your local advisers

Permits and licensing in the host country.

Who buys the crop?

Harvest and marketing are part of our scope, stage 11.

You decide on the build only after the numbers stand up.

The first commitment is a conversation. The second is a feasibility study on your land. The build comes after you have seen the soil results, the crop fit and the budget.

01

Partnership call

A first conversation with Merav and Yiftach: the land, the crop you have in mind, your timeline.

YOU LEAVE WITH
A clear yes or no on fit, and the next step

02

Site and data review

We look at the location, the soil, the water and the climate of the site.

YOU LEAVE WITH
A list of what has to be tested on site

03

Feasibility

Soil testing, crop fit, and a business plan with a budget for the investor.

YOU LEAVE WITH
Soil results, crop recommendation, business plan and budget

DECISION POINT
Go, adjust or stop. Nothing is built before you decide.

04

Design and build

Farm layout, structures, irrigation and roads, then manufacturing, logistics, construction and planting.

YOU LEAVE WITH
A planted farm, built to the approved design

05

Operate

Local team, agronomy, maintenance, harvest and marketing, for as long as you want us there.

YOU LEAVE WITH
A producing farm and time to grow the business

Full turnkey or a single stage

Engage us for the whole path, or for the stage you need, such as feasibility or net houses only.

Certified crews

Insured teams, certified for work at height, who train and lead local workers on site.

This is how a net house goes up.

Six photographs from MIFTAH projects, in build order. Same crews, same sequence, on every site.

01
Setting up on site

02
Marking the pole lines

03
Galvanized poles

04
Tensioning cables

05
Spreading the net

06
Ready for planting

Built in our own plant

Made in-house
Poles, nets, cables and fittings are produced in our plant and tested before shipping.

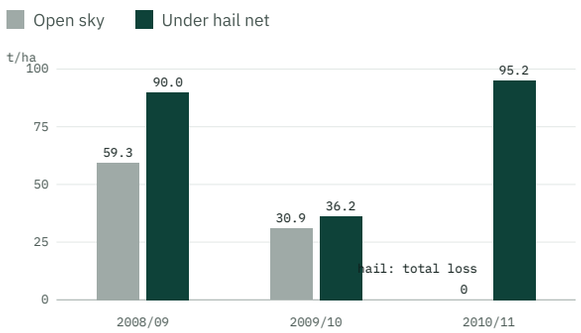

Galvanized steel only
On every structure we build.

Engineered per site
Every structure is designed around the crop, the soil and the local wind.

ILLUSTRATION · FACTORY IMAGE

Why serious growers put the crop under a net.

One hail year: apple yield, t/ha

‘Royal Gala’, Vacaria, Brazil; one site. Bosco et al., Bragantia 77(1), 2018.

Bananas in Israeli net houses

+30%
productivity: heavier bunches, fewer lost

~25%
water saved through net shading

20–30%
water saved, Jordan Valley, same or better yield

–41%
irrigation, 20% screen with dynamic scheduling (one trial)

Elingold et al., Horticulturae 8:619, 2022 · Tanny, Cohen & Israeli, Acta Hort. 927, 2012 · Cohen et al., Acta Hort. 1268, 2020 (–41% computed from published figures).

Europe keeps buying more

~920,000 t
EU avocado imports 2025, up ~15%

~5.2 Mt
EU banana imports 2024, world’s largest importer

+30%
Morocco avocado exports 2025, ~90% to the EU

~2,700 ha
avocado in Portugal, early 2023 (under 300 ha in 2013)

FAO, Major Tropical Fruits Market Review 2025 (2026) · FAO, Banana Market Review, prelim. 2024 (2025) · CIRAD for Hass Avocado Board, Feb 2023.

The weather is getting more expensive

€822 bn
EU climate-extreme losses 1980–2024; a quarter in 2021–24

×3
very large hail (≥5 cm) in northern Italy vs the 1950s

+40–80%
large hail in central Europe by 2071–2100 (high emissions)

7.4%
of Africa’s agricultural GDP lost to disasters

EEA, Oct 2025 · ESSL / Battaglioli et al., 2023 · Rädler et al., npj Clim. Atmos. Sci. 2, 2019 · FAO, Impact of Disasters on Agriculture 2025.

Most figures come from single-site trials and are shown with their conditions. They are not a forecast for any specific farm. Full references on request.

Built abroad with local crews. Trusted at home.

NET HOUSES BUILT ABROAD, M²

Mexico	150,000
India	80,000
Honduras	70,000
Spain	60,000
Georgia	50,000
Total	**410,000 m²**

Also: an avocado net house in Portugal, and a complex project in Belarus with local production and local crews, delivered on schedule.

SELECTED PROJECTS

Bananas, Western Galilee Net house with 11% shade net	Israel
Apples, Golan Heights Nets fold away for the winter	Israel
Kiwi, Bar’am Net house with a pergola trellis	Israel
Cherries Orchard net house	Israel
Avocado Net house	Portugal
