

CAPABILITY STATEMENT

Fuel infrastructure for data center emergency generators

1972

Family company
Israel

Tanks, day tanks and N+1 feed lines, from the pit to the control connection

From the field: storage tanks placed in a lined pit

COMPANY OVERVIEW

S. Gotovski Ltd. is an execution contractor for fuel infrastructure. Since 1972 we have built what lies beneath the forecourt: tanks, piping and concrete that must work for decades. We build and renovate fuel and LPG stations alongside Israel's major fuel companies, and bring the same engineering to data centers, where a generator must receive fuel under any conditions.

CORE CAPABILITIES: DATA CENTERS

- **Pits and foundations:** excavation, containment liners, anchoring and concrete foundations for tanks and equipment
- **Underground tanks:** double-wall storage tanks, lifting, placement and connection
- **Above-ground tanks and day tanks:** tanks on steel frames and day tanks beside the generators
- **N+1 feed lines:** redundant lines so every unit keeps receiving fuel when one line is out of service
- **Transfer pumps and valves:** transfer systems, valve manifolds and fill systems
- **Leak detection and monitoring:** sensors, tank monitoring and connection to the site's control systems
- **Testing and documentation:** pressure and tightness testing of every section, documented for handover
- **Coordination:** with the electrical consultants, designers and regulators throughout the project

HOW WE WORK

01	02	03	04	05
Planning and coordination	Pits and foundations	Tanks	Feed lines, pumps, leak detection	Testing, connection and handover

OTHER FIELDS OF WORK

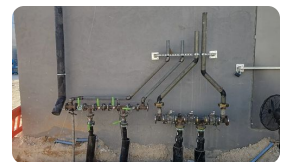

- Fuel station construction
- Station renovation at operating stations
- LPG stations
- Fuel piping
- Earthworks and site development

COMPANY DATA

Legal name	S. Gotovski Ltd.
Founded	1972, incorporated 1988
Company no.	512635335
Ownership	Family company, second generation
Service area	All of Israel
Resources	Our own heavy equipment, permanent crews
Office	67 HaMeyasdim St., Moshav Bnaya, Israel

SELECTED EXPERIENCE

- Data center project for Amazon: storage tanks in a lined pit, crane lifts, above-ground tanks on concrete foundations, valve manifolds, feed lines, on-site welding
- Clients include Paz, Sonol, Dor Alon and Amazon

PRACTICE

- Double-wall tanks and piping with monitoring of the interstitial space
- Documented pressure and tightness testing
- Cathodic protection and static grounding
- Israeli Ministry of Environmental Protection and Ministry of Labor requirements
